AV2 LOCK

Multitrade's Aluminium Collection of doors are fitted with Schuco AV2 slam-shut multi-point lock mechanisms as standard.

Used with the stainless steel bar handles shown opposite, the lock has the cylinder positioned at mid-door height.

DESIGN CONSCIOUS

Brushed Stainless Steel Bar Handles have been chosen to complete the look of the Multitrades Aluminium Collection creating a beautifully contemporary entrance door.

Today's world is anything but certain, so one of our priorities is to ensure that your home always feels safe and secure.

For instance, all our systems have been tested to meet rigorous European and/or UK standards for burglar resistance. And since external glazing beads are the easiest way to effect a forced entry, ours are always located on the inside.

Then there's our SafeMatic 5-point lock for entrance doors which locks automatically thanks to special latches that act as primed bolts when the door is pulled to.

And talking of locks, we've enough different types to allow you to set the level of home security you're comfortable with: basic or advanced? Mortice or multi-point? The choice is yours!

Schueco SafeMatic lock offers convenience and security

Multi-point locking: the ultimate security option
